Office Action Summary

Application No.

10/821,628

Applicant(s)

HARRER, HELMUT

Examiner

Yaritza Guadalupe McCall

Art Unit

2859

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 February 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 12/2/2005.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

In response to Amendment filed February 23, 2006

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 6 - 7 and 9 – 11 are finally rejected under 35 U.S.C. 103(a) as being unpatentable over Ernst (US 4,495,700).

With respect to claim 1, Ernst discloses a position measuring system (See Figure 6), comprising a housing (64) comprising a wall, said wall having an opening (67) and comprising a deformation (note how the opening shows an alteration to its form and shape); a measurement device (See Column 5, lines 36 – 48) accommodated in said housing (See Figure 6), said measurement device detecting and processing measurement values and outputs a position-dependent measurement signal; a cable (66) comprising what could be considered a shield (as suggested from Figure 6 where it is shown a shield covering three signal lines that are attached to the measurement device) around signal lines (See Figure below), wherein said cable is positioned within said opening and said signal lines are electrically connected to said

Art Unit: 2859

measurement device so as to carry said measurement signal; and wherein said deformation of said wall fixes said cable in said opening and for binding said shield to said housing so as to provide a secure electrical contact between said shield and said housing.

FIG. 6

Ernst does not disclose the deformation being integral as stated in claim 1. Ernst does not disclose the adhesive or ply as stated in claims 6 and 7.

With respect to claim 1 : Ernst discloses all the limitations as stated above, but fails to disclose the deformation being integral to the housing (64). It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide a deformation to said housing forming an integrally molded deformation, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. Howard v. Detroit Stove Works, 150 U.S. 164 (1893).

With regards to claims 6 and 7 : Ernst discloses a housing (64) having an opening (67) provided with a material (as suggested from figure 6), however, the particular material being used has not being disclosed. The particular type of material used to fixedly attach said cable in said opening, absent any criticality, is only considered to be the use of a “ preferred ” or “ optimum ” material out of a plurality of well known materials that a person having ordinary skill in the art at the time the invention was made would have find obvious to provide using routine experimentation based, among other things, on the intended use of Applicant’s apparatus, i.e., suitability for the intended use of Applicant’s apparatus. See In re Leshin, 125 USPQ 416 (CCPA 1960) where the court stated that a selection of a material on the basis of suitability for intended use of an apparatus would be entirely obvious. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to modify Ernst by using an adhesive or ply on said opening, since these are both well known fasteners that are used alternatively to securely hold a structure to a surface.

Regarding claim 9, Ernst discloses a position measuring system wherein said housing (64) is embodied cylindrically with an end wall and a code disk (53) that measures angles and contains a detector device (54) that scans the code disk.

In regards to claim 10, Ernst also discloses a position measuring system wherein said opening (67) extends transversely to a longitudinal axis of said housing and is disposed on said end wall.

With respect to claim 11, Ernst teaches a position measuring system wherein said end wall, in a region of said opening, has a swelling of material (See Figure 6).

3. Claim 2 – 5 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ernst (US 4,495,700) in view of Schneider et al. (US 6,531,880).

Ernst discloses a position measuring system as stated in paragraph 2 above.

Ernst does not disclose the jacket surrounding the shield as stated in claim 2.

In regards to claim 2 : Ernst discloses a position measuring system comprising a cable (66) and a shield but fails to specify the use of a jacket. Schneider et al. discloses a system comprising a sensor (102) including a cable (140) electrically connected to it, said cable including signal lines (142) and a shield (144) and further comprising an outer jacket (140, which surrounds the shield and the signal lines 142 as shown in Figure 1) that surrounds a shield; said shield surrounds said signal lines, and said shield in said opening is in electrical contact with said housing in order to ensure an optimum and maximum energization of the cable and prevent from physical damage, i.e., overheating, to the sensor or other components of the system. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to replace the cable disclosed by Ernst with a cable having a shield, a jacket and signal lines as taught by Schneider et al. in order to ensure an optimum and maximum energization of the cable and prevent from physical damage, i.e., overheating, to the sensor or other components of the system.

In regards to claim 3, the combination of Ernst and Schneider also discloses said deformation (10) comprising a first portion in which said wall does not contact said shield and a second portion in which said wall contacts said shield (See Figure 1).

Regarding claim 4, the combination of Ernst and Schneider teaches said first portion wherein said wall directly contacts and surrounds the circumference of said jacket.

Art Unit: 2859

In regards to claim 5, the combination of Ernst and Schneider teaches said second portion wherein said shield is turned back onto said jacket.

With regards to claim 8 : Ernst and Schneider disclose a housing (8) having an opening but does not specifies any material being used to secure said cable in said opening. The particular type of material used to fixedly attach said cable in said opening, absent any criticality, is only considered to be the use of a “ preferred ” or “ optimum ” material out of a plurality of well known materials that a person having ordinary skill in the art at the time the invention was made would have find obvious to provide using routine experimentation based, among other things, on the intended use of Applicant’s apparatus, i.e., suitability for the intended use of Applicant’s apparatus. See *In re Leshin*, 125 USPQ 416 (CCPA 1960) where the court stated that a selection of a material on the basis of suitability for intended use of an apparatus would be entirely obvious. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to modify Ernst and Schneider by using an elastic ply on said opening, since this is a well known fastener that is commonly used to securely hold a structure to a surface.

Response to Arguments

4. Applicant's arguments with respect to claims 1 – 11 have been considered but are moot in view of the new ground(s) of rejection.

Applicant arguments' regarding the Ernst reference not teaching an integral deformation is not persuasive. Applicant contends that the deformation (67) shown by Ernst is a separate component from the wall and that it is not a deformation of the very same wall. The Examiner point out that although applicant amended the claims to specify that the deformation is integral, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to make the deformation shown by Ernst an integrally molded deformation, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art.

Applicant also contends that the cable (66) of Ernst does not suggest a shield as claimed. As best understood by the Examiner, a shield is a "protective structure", as defined by Webster's Collegiate Dictionary 10th Edition, and the structure shown by Ernst clearly meets this criteria. Figure 6 of Ernst clearly shows the protective structure (66) surrounding signal lines that are in connection with the measurement device, therefore, clearly meeting the requirements of the claimed subject matter. Applicant is reminded, that upon examination of a claim, claims are given their broadest reasonable interpretation and although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

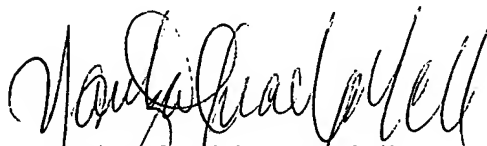

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yaritza Guadalupe McCall whose telephone number is (571)272-2244. The examiner can normally be reached on 8:00 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego F.F. Gutierrez can be reached on (571) 272-2245. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
